personalised
digital health

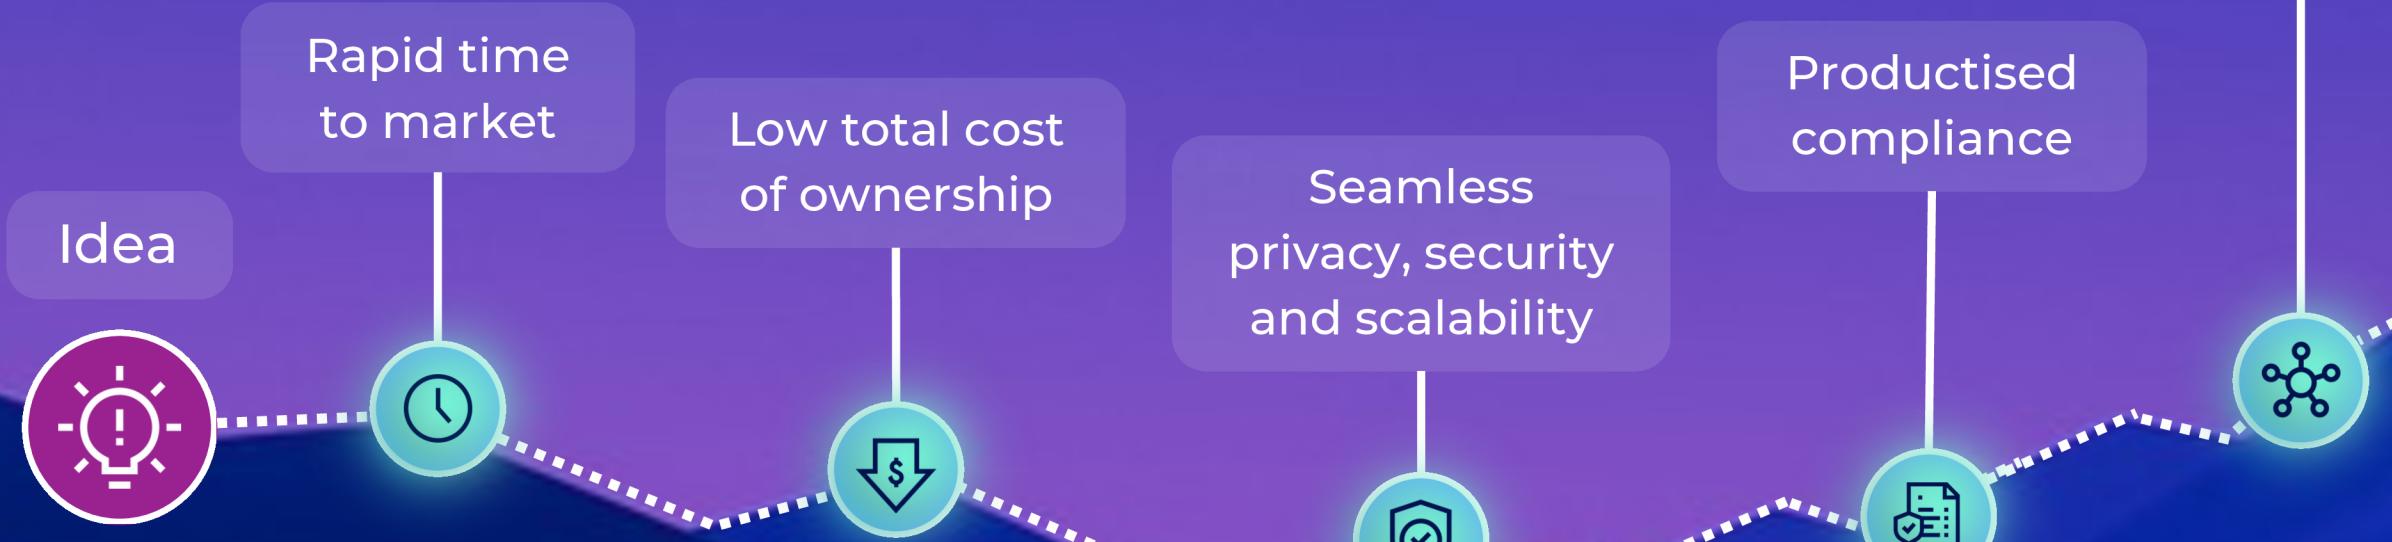

The traditional approach to digital health creation is filled with barriers, preventing innovation.

A no-code ecosystem that simplifies building and scaling of digital health apps. Without code.

One platform. Unlimited possibilities.
From idea to global impact.

Clinnovate WM Programme Overview

Key Outcomes

The Clinnovate WM programme guides clinicians on a journey of transforming an idea into a fully-functioning digital health solution.

Over the course of the six month programme, you will:

- learn how to create a mobile or web app on the Cogniss no-code platform,
- design and build an MVP version of your digital health solution,
- test your app with users and iterate based on feedback,
- prepare for future launch and commercialisation of your app.
